Writing Remote Learning

Yesterday we looked at different types of instructional texts. In class, we came up with lots of different types - giving directions, building a shelf and baking a cake.

Your activity today is to mind map different features (e.g. headings, subheadings) of an instructional text.

Once you have completed this task; feel free to have a go at making it!

Water Fight!

You don't need water pistols for a top water fight! There's an arsenal of water blasters ready and waiting around your home, and you can even make your own water bombs!

For the best water fights...

- * It can get slippery, so find a large, safe area to play in.
- * Always ask permission before you turn your garden into a splash arena!

Bombs away!

Making your own water bombs is fun – and throwing them is even better!

YOU WILL NEED

- Squares of paper (A4 size cut down to a square is ideal)
- Plenty of water

WATER FIGHT KIT LIST

Buckets

Essential for holding your water supplies

Sponges

Perfect super-soakers for drenching in one good splat!

Squeezy bottles

For a direct squirt that hits the spot!

1 Fold the paper in half diagonally and unfold. Repeat in the other direction to make an X shape.

2 Turn the paper over and fold in half horizontally, top to bottom. Then repeat, side to side.

3 Turn the paper over so the sides are sloping downwards and pinch the paper on either side of one diagonal crease, creating a star shape.

4 Carefully flatten down into one triangle shape.

5 Take the bottom corners on the front side and fold them up to the top in the middle. Repeat on the back to make a square.

6 Fold the side corners in to the middle line. This will create little pockets. Turn over and repeat on back.

7 Fold the flap above each pocket out to the side, then fold it back in half to the centre, to make a smaller, triangular flap.

8 This flap should then fit neatly inside the pocket. Repeat on the other sides.

9 Blow in the hole in the bottom to inflate, then fill with water.
